

How Gygax and Arneson Work Together

One loop: design → predict → play → grade → compare → improve → repeat. (2026-06-09)

The three rules that keep it honest

1. **Gygax never produces the evidence it grades** — Arneson runs, Gygax judges.
2. **Every file says how it was made** — pretend and real can never be confused.
3. **Pretend is a preview, real is the proof** — the compare step is where credibility lives.

Why the loop compounds

Each pass makes both constructs better: the gap report shows where the pretend agent guessed wrong, the workshop fixes it, and the next preview is cheaper and closer to reality.
